

Instrumentation Services

M&I Electric Industries, Inc. has developed a comprehensive range of services designed to keep instrumentation systems operating accurately and at peak efficiency. These services have been designed around the key components and systems that form the foundation for modern electrical power, control, and instrumentation systems. Regular testing and maintenance of the critical instrumentation within these systems helps minimize unplanned outages. And rapid, responsive services helps restore failed components or systems to operation as quickly as possible.

Sophisticated electronic equipment requires equally sophisticated service. Backup power systems, such as uninterrupted power supplies (UPS), provide critical power to computers, instrumentation and control systems, and critical communications systems. M&I has designed a complete range of service programs that help keep power systems

operating at peak performance. Ranging from regular battery maintenance to UPS load testing and waveform analysis, M&I services can meet almost any requirement. This is one more reason that we say that M&I offers Electrical Services, by design.

M&I also offers a full range of field and shop services to test, calibrate, and repair all types of control devices. Protective relays can be tested to assure their proper performance during a power system disturbance. If needed, our technicians can calibrate or repair the equipment as required to return the device to its original performance specifications. Likewise, meters, transducers, and all sorts of industrial electronics can be tested, calibrated, and repaired in the field or in the shops.

For these reasons, M&I confidently offers the following Electrical Services, by Design:

-
- UPS Test, Maintenance, and Repair
 - Battery System Test, Maintenance, and Repair
 - Protective Relay Test and Calibration
 - Meter and Transducer Test and Calibration
 - Instrument Transformer Testing
 - Industrial Electronics Test and Repair
 - Turbine Generator Instrumentation Test and Repair
 - Multi-functional Instrumentation Upgrades
 - PLC System Upgrades
 - Data Acquisition and Control Systems

Service Available 24 Hours per Day
