FSX Conference

American Access Technologies, Inc. (NASDAQ:AATK)

In my presentation, I will highlight AATK's recent accomplishments including our emergence from the recession of the millennium to the achievement of RECORD SALES numbers since 2003, our relentless march to profitability and our debt-free status. I will discuss our patented products, our national sales partners and the growth and acceptance of our products within the industry.

The following is a brief profile of American Access Technologies, Inc.:

American Access Technologies, Inc. develops and manufactures patented zone cabling enclosures for the telecommunications industry, enabling businesses and government entities to move, add to and change copper and fiber-optic cabling to keep pace with changes in high-speed communications networks. The concept of "zone cabling" integrated through the Company's products can save up to 65% of the cost to wire data centers and networks by eliminating excessive material and labor used in wiring and rewiring in traditional home run cabling arrangements. The Company's Omega Metals subsidiary manufactures its proprietary products, and also employs state-of-the-art metal fabrication and finishing techniques for public and private companies and for the U.S. government.

My goal for this conference is to reach out and tell the AATK story to a new audience. The Company has kept our "awareness budget" to a minimum during our march to profitability and this trip marks our initial foray into a conference setting.

Attached please find our latest investor package. This package provides you with a view toward the growing awareness and excitement about zone cabling in the telecommunications industry, as well as with our role in its acceptance and use.

Included in the package:

- 1) AATK Sales Brochure
- 2-3) Two advertisements featuring the AATK patented product
- 4) White Paper on Zone Cabling- A study by a firm in Australia, which outlines the cost-savings associated with our patented products. The conclusion is on page 19 and more importantly, please review the list of Companies that offer zone cabling enclosures on the bottom of page 20.

- 5) The article, "Get into the Zone with Cost-Saving Enclosures" discusses our zone cabling partners' views on the topic. We have the patent!!!
- 6) The article, "Another Look at Zone Cabling" discusses zone cabling in the present and future written by Panduit.
- 7) Wireless and Zone Solutions White Paper written by Chatsworth Products, Inc
- 8) "Zone Cabling" Saves the Day case study

There are many advantages to zone-cabling and their related cost savings. Just to highlight a few:

- Specially trained, highly-paid technicians will no longer be required to make those changes when systems grow or are reconfigured.
- The new equipment just plugs in, creating less down time and less loss of productivity. Cables are easily re-routed and reused.
- Less cable is used when you zone cable, reducing the cost of materials and labor.
- Installation is easier and quicker, causing fewer disruptions and down time for office workers.
- Money is saved with the initial installation and when systems are changed.

The move in time with zone cabling is faster, moves, adds, and changes are faster and there are reduced costs to moves, adds and changes. There will also be higher cabling performance due to the reduced length of the cables. Our enclosures also make better use of telecommunications closets, reducing the mass of cables to be run throughout the building. Therefore, building owners have more rentable space.

If you have any questions, I would be happy to discuss them with you. I am an investor-friendly CFO- so please call anytime! You can reach me at 352-473-6673 ext 120 or jmcguire@aatk.com.

Regards,

Joe McGuire
